

Woodstock Photography Passport Photos

Effective Tuesday, January 23, 2007, all international air travelers who are residents of the United States must have a valid US passport.

By 2008, all US citizens traveling internationally by land or sea must also have a valid US passport.

~ Passport photos must meet specific criteria.

A specific size, head size, background, and number of prints must be consistent with guidelines. Retouching of passport and visa photos is prohibited. However, our experience in lighting, posing and print production will result in higher quality images; portraits that you will be pleased to have for the ten years they are valid.

~ Digital passports photos allow us to provide you with more copies.

Passport applications require that two identical photos be provided. Using digital technology, we can provide you with a minimum of four copies. As many destinations also require a valid visa, these extra copies come in handy.

~ Guaranteed acceptance of your photos.

With years of experience, we guarantee that your passport photos will be accepted. If for some reason they are refused, we will redo them until they are accepted. For identification photos that will be used for purposes other than a U.S. passport, please be prepared to present the correct document that provides the specific information related to the photograph requirements.

~ We can photograph babies and children.

Many businesses providing passport pictures use a dual lens Polaroid camera with a fixed focal length. Because babies and children have smaller heads, these cameras cannot create the specified head size that is in focus. We use a digital camera, so this isn't an issue.

4 Identical Passport Photos ~ \$25, Extra sets of 4 ~ \$5,
Please schedule an appointment, and allow one week for delivery.
